Detailed product introduction

Hadish Market

Product introduction

Hadish Market is Pars Hadish's integrated e-commerce and sales management platform, designed for launching online stores, managing in-person sales, and creating marketplaces with multiple vendors. The system manages products, orders, inventory, payments, and sales processes through a centralized platform.

In the online store, customers can search for products by category, brand, price, and other attributes, review product details and availability, and place orders. Vendors and managers can also use dedicated panels to manage products, pricing, discounts, orders, and sales performance.

Detailed product introduction

Hadish Market

Product introduction (continued)

For example, a customer selects several products from different vendors and adds them to one shopping cart. After the delivery address and time have been specified, the final order total is calculated, including discounts and shipping charges. The customer pays and can track the order until delivery. On the store side, orders are made available to vendors for processing and preparation. Hadish Market is also designed to integrate online and in-person sales and connect to retail checkout, inventory management, and accounting systems.

Hadish Market

Product features and capabilities

Online store

Offer and sell products through a website and application.

Marketplace with multiple vendors

Manage products and orders from different vendors on one platform.
