Detailed product introduction

Hadish Ticket

Product introduction

Hadish Ticket is an integrated electronic ticket sales and management system for cultural, historical, sports, leisure, and tourism venues. It is designed to organize ticket sales, issuance, validation, and monitoring, helping venues manage in-person, online, operator-assisted, and kiosk sales through a centralized platform.

Managers can define projects, locations, services, ticket types, time slots, capacity, and prices in the system, and monitor ticket sales and usage in real time. Hadish Ticket also supports transaction recording and tracking, cancellation rules, user management, and management and financial reporting.

Detailed product introduction

Hadish Ticket

Product introduction (continued)

For example, a ticket office operator or the online sales system selects the service and number of tickets. Once payment is complete, an electronic ticket is issued with a QR code, barcode, or ticket number. At entry, control staff can check the ticket's validity, associated service, usage, and remaining entitlement. Recording the sales source and usage history also makes it easier to track tickets and control repeat use of a service. The system can be used for individual venues and large networks of multiple venues.

Hadish Ticket

Product features and capabilities

Multichannel sales

Support online, in-person, operator-assisted, and kiosk sales.

Project and location definition

Manage multiple projects, venues, and attractions in one system.

Service and ticket management

Define service types and different types of tickets.

Time slot and capacity management

Control capacity separately for each service and time slot.

Pricing and discounts

Set prices, discounts, and sales conditions for each ticket.

Hadish Ticket

Product features and capabilities (continued)

Electronic ticket issuance

Generate tickets with QR codes, barcodes, or ticket numbers.

Ticket validation

Check ticket validity at entry and record usage.

Cancellation and record keeping

Apply cancellation rules and maintain complete operational records.

Transaction and payment management

Record payments and connect to payment gateways.

Sales source recording

Retain the sales source for more accurate tracking and settlement.

Hadish Ticket

Product features and capabilities (continued)

User and access management

Define roles and access levels appropriate to each responsibility.

Management reporting

Provide reports on sales, usage, transaction details, and performance.

Hadish Ticket

Users and applications

Managers of cultural, historical, sports, and leisure venues

Monitor sales, capacity, transactions, and reports

Operators and ticket office staff

Record sales, collect payments, and issue tickets to visitors

Entry control staff

Validate tickets and control service use at entry

Finance and operations staff

Review transactions, sales records, settlements, and performance reports

Hadish Ticket

How to use it

1. **System structure setup**

   Register projects, locations, services, ticket types, time slots, and capacity.

2. **Sales configuration**

   Define prices, discounts, sales rules, and ticket sales channels.

3. **Purchase request**

   Have the operator or user select the service and number of tickets.

4. **Payment and ticket issuance**

   Record the transaction and generate an electronic ticket for the selected service.

5. **Entry and usage control**

   Validate the ticket and record usage at the entry point.

Hadish Ticket

How to use it (continued)

6. **Monitoring and reporting**

   Review sales, capacity, usage, transactions, and project performance.
